Patients Name: _____

Recommended By: _____

Position: _____

Unlike costly chemically based synthetic saliva substitutes, **A.S Saliva Orthana is formulated from naturally occurring mucin**. The unique properties of mucin help to ensure **prolonged lubrication** of the mouth and mucosa, helping to relieve the symptoms of xerostomia.

The pump action spray used with A.S Saliva Orthana **doesn't contain any propellents**, nor does it contain thickening agents that can often leave an unpleasant stickiness in the mouth.

Furthermore, **A.S Saliva Orthana** is one of only a few products that **is pH neutral**. This is an important consideration, as **any increase in the acidity** levels in the mouth can **increase soreness** and result in **tooth decay**.
